Assignment No.1

A bookstore is introducing a digital inventory system to organize its collection of books. Design a Book class
that stores essential book details and allows the staff to record and display the information whenever
required.
Solution

```
#include <iostream>
#include <string>
using namespace std;
class Book
{
private:
string title;
string author;
string ISBN;
double price;
public:
// Function to record book information
void recordBook()
{
cout << "Enter Book Title: ";
getline(cin, title);
cout << "Enter Author Name: ";
getline(cin, author);
cout << "Enter ISBN: ";
getline(cin, ISBN);
cout << "Enter Price: ";
cin >> price;
cin.ignore();
}
// Function to display book information
void displayBook()
{
cout << "\n----- Book Information -----" << endl;
cout << "Title : " << title << endl;
cout << "Author : " << author << endl;
cout << "ISBN : " << ISBN << endl;
cout << "Price : " << price << endl;
}
};
int main()
{
```

```
Book book;
cout << "===== Digital Book Inventory System =====" << endl;
book.recordBook();
book.displayBook();
return 0;
}
```
